

DRYSPACE®

Reduce spoilage Keep your shipment dry

Cargo shipments around the world are exposed to varying moisture and humidity levels. When goods are transported between different climates, condensation occurs which damages your goods.

Reduce Spoilage

Dryspace® prevents humidity levels in your container from reaching dew point and condensation forming by absorbing the moisture and humidity. Dryspace® inhibits mould, mildew and the odours these cause.

250% More

Dryspace® is highly adsorbent and can increase its weight by up to 250%. Dryspace® will absorb 2 to 3 times more than the older style silica gel and clay based desiccants.

Leak Proof

The moisture absorbed is stored in gel form and is held in a durable double layer of spun bound and Tyvek bags. Dryspace® is one way absorbing and will not leak.

Long Lasting

Dryspace® will continue absorbing for up to 90 days, long after other desiccants start to fail.

Savings

Dryspace® is economical. With its high absorption properties you can use less units than older silica gel and clay based desiccants.

No More Kraft paper or cardboard lining required.

Eco Friendly

Dryspace® desiccants are environmentally safe and made from natural non toxic materials. They are totally sealed and can be safely used with foods and all products. Safe and easy to dispose of.
